

# WIKI JS

Vickers, Knoop, Brinell

WIKI JS - THE MODELS

**WIKI 200 JS**  
Top-of-the-line automation and accuracy for Vickers and Knoop. Fully motorized system for Case Hardness Depth test **CHD**. Single or multiple samples in automatic cycle. Motorized turret 6 positions for indenters and objectives. Motorized Z axis and automatic measurement with autofocus. Software for automatic evaluation of indents and automatic lighting. Motorized XY stage 100x60 mm or 200x100 mm with 0,5 µm step.

Everything is automated, freeing users for other tasks and minimizing subjectivity associated with human intervention.

**WIKI 100 JS**  
Motorized turret 6 positions for indenters and objectives. Motorized Z axis. Automatic measurement with autofocus. Software for automatic evaluation of indents. Automatic lighting. As optional: Manual XY stage 100x100 mm with 10 µm step.

The automatic measurement and autofocus minimizes subjectivity associated with human intervention. The tester can be used by different operators.

**WIKI 90 JS**  
Motorized turret 6 positions for indenters and objectives. Software for automatic evaluation of indents. Automatic lighting. As optional: Manual XY stage 100x100mm with 10µm step.

Easy measurements on screws, tools, rings and irregular small pieces. Different anvils are available for special sample fixing.

LOAD CELL AND CLOSED LOOP TECHNOLOGY

WIKI JS is the top-of-the-line of automation and accuracy for Vickers and Knoop hardness measurements in compliance with ASTM and ISO hardness standards. Load forces are applied through load cells and electronically controlled in "Closed Loop" (Pat. AFFRI) with a frequency of 1 khz. Each load force is automatically programmed and controlled assuring perfect linearity in every range eliminating the problems associated with traditional dead weight system testers. Results are not affected by any structural deflection, misalignment and external vibrations.

# WIKI JS - MAIN FEATURES

## AUTOMATIC READING AND MEASURING

Just push the start button and the head performs the test cycle in automatic succession without breaching a phase:

- 1 Automatic contact with the specimen
- 2 Automatic following of every predefined pattern and performing of each indentation, no matter the amount
- 3 Automatic focus and reading for single or multiindentation

The entire test cycle is complete and the results are listed along with the indentation image, statistics and CHD charts.

## MOTORIZED HEAD

Up to 300 mm electronically controlled height capacity for fast or slow vertical movements. Very rapid and ultra-sensitive drive for a perfectly accurate autofocus. The autofocus combined with the automation of the whole software avoids human influence and gives repeatability even when used by different people.

## 6 SLOTS ROTATING TURRET

Horizontally rotating turret with four slots for magnification lenses and two for indenters. All optical microscope objectives can be pre-installed and combined with indenters for every Vickers and Knoop hardness scales. Optical objectives selection of 2.5x – 5x – 10x – 20x – 40x – 50x – 100x.

## IMAGE AUTO-ANALYSIS

With software controlled focus, image cleaning, shading correction and regulated light source, reproducible results are obtained regardless of the number of indents measured. From perfectly polished to rough and etched samples, the auto-detection capabilities of WIKI JS allow measurements on a variety of sample surfaces.

## OPTIONAL TESTS

Not only Vickers! The hardness tester can be upgraded with Superficial Rockwell and Brinell test methods. Thanks to the double indenter turret it is possible to use two different indenters and mix multi-scale patterns.

## TEST DATA IMPORT AND EXPORT

Data enter via code bar scanning. Test cycles or sample drawings can be loaded directly from a central system by means of a bar code scanner. This hardness tester gets all informations fully automatically. After test run the bar code datas are added with results and immediately returned to the order management system.

File import and export is configurable freely and therfor adaptable individually.

## X/Y FULLY MOTORIZED

XY motorized table with an accuracy of +/- 0.5 µm steps. Reference points for indentation patterns can be positioned precisely where they are required. The table allows automatic multi-indentation CHD test cycles on multiple samples with perfect positioning on the entire area, no matter the indentations amount.

## X/Y MANUAL TABLE

Manual XY table 100x100 mm with 10 µm step. This table is a perfect solution for not-daily multi indentation test cycles. The table allows manual CHD case depth tests and can be provided with digital micrometers for automatic CHD graph generation.

## ELEVATING SCREW

Vertically sliding chromed work table capable of bearing masses up to 2000 kg. It is possible to install different types of piece holder anvils: from large plane tables to V shaped anvils or special solutions for irregular specimens.

## LARGE AND STABLE BASE

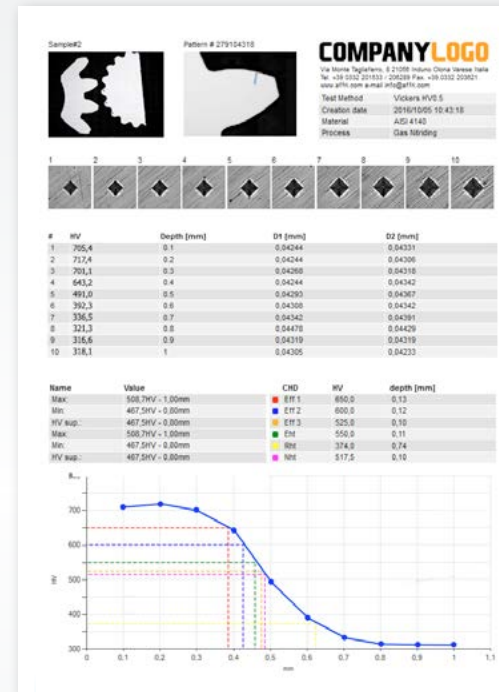

The wide work table base is capable of bearing masses beyond 1000 kg which allows for steady hardness measurements on bulky or irregular pieces. It also offers a comfortable working base for small pieces.

# WIKI 200 JS SOFTWARE

Customizable test report with client logo and information. Put as many sample information as you need, including pictures of the specimen and test area.  
See the pattern and each indentation at a glance. Examine results, statistics and CHD diagram with outlined depth. Results can be exported also as CSV file.

**SINGLE OR MULTIPLE SAMPLES IN AUTOMATIC CYCLE:** Just map out indentation traverses where they are required, set the load and press START, the hardness tester intelligently follows the predefined patterns, indents the sample, focuses when needed, measures, and generates data dynamically.

The software is designed for an intuitive and simple use. With three easy steps, it provides added precision when positioning indents thanks to its integrated macro view technique and layout tools. By visualizing the complete sample or a single sample, traverses and/or patterns can now be mapped out with unequaled precision.

## 01 SURFACE MAPPING

Obtain a perfect, detailed, high resolution view of the whole sample holder offering sharp close-ups as well as global views. Multi sample vision offers a complete image of a sample without any distortion, no matter its size. No need for a second camera.

## 02 SETUP PATTERNS

Save, open, modify, copy and paste or create new patterns to predefined locations with a simple click. Traverses and patterns can be individually adjusted. Create case depth traverses or fill a surface with indentation points to control sample uniformity.

Reports are automatically generated and archived during the test cycle.  
Just click on one plot to check the indentation.

## 03 PRESS START GET RESULTS

The software follows the patterns, indents the sample, measures, and generates data dynamically. Review results in graphical and/or tabular format. Export results to any spreadsheet application, or simply print standard or customized reports.

**EVERYTHING IS AUTOMATED, FREEING USERS FOR OTHER TASKS:** Auto focusing, automatic measuring and reporting, allows this system to function unattended for hours without interruption, saving time and money, thus increasing output and productivity.

# AUTOMATIC MEASUREMENT CYCLE ON MULTIPLE SAMPLES

## CHD TRAVERSES AND PATTERNS

Single or multiple traverses/patterns can be rapidly created. With one simple click of the mouse the line, the angle and the starting point of the indentations are determined.

## CREATE, SAVE AND RELOAD

No need to create the same pattern over and over again. This feature is extremely useful for users who analyze the same kind of areas repeatedly. Once a pattern has been created, you can save it and re-load it later to duplicate the analysis on a new sample.

## EDIT, MOVE OR DELETE

Select the pattern from preview image and modify direction, position, hardness scale, number and distances of indent, pattern name and point of focus.

## ZOOM IN AND OUT

Zoom out to look at the entire sample in order to identify the pattern position and direction. Zoom in to verify pattern distances and spot surface imperfections.

Traverse layouts and test points can be programmed by simply clicking on the desired test point locations.

Save, cut, copy, or paste traverses/patterns to predefined locations with a simple click of the mouse.

Use image preview to control the whole sample patterns. Identify the test zone and place patterns with a simple click.

Sample #1						
Pattern name	Scale	Lens	Timer	#	Depth(mm)	
Pattern # 1	HV0.1	40x	5s	10	0.10..1.30	X
Pattern # 2	HV0.3	40x	5s	10	0.00..2.00	X
Pattern # 3	HV0.3	40x	5s	12	0.10..0.30	X

  

Sample #2						
Pattern name	Scale	Lens	Timer	#	Depth(mm)	
Pattern # 1	HV0.1	40x	5s	10	0.10..1.30	X
Pattern # 2	HV0.3	40x	5s	10	0.00..2.00	X
Pattern # 3	HV0.3	40x	5s	12	0.10..0.30	X

The T-Bar tool rotates traverses to any angle to ensure its perpendicularity to the sample edge or to accommodate sample tilts.

**CHD TRAVERSES**  
Case Hardness Depth

**FREE PATTERNS**  
Create the shape you want

**SURFACE PATTERN**  
Study sample uniformity

**RADIUS PATTERN**  
Study uniformity per radius

## LENGTH AND DRAWING TOOLS

Use this feature to place reference points, find the middle, text some notes and measure the length of anything.

No matter the complexity of the pattern layout, combining intelligent macro views with drawing and length tools allows traverses and/or patterns to be positioned precisely where they are needed. These features also help finding the center of the sample or the center of a gear tooth flank and the pitch point. Placing traverses and pattern is made easy. Use this tool to draw straight and/or parallel lines, add text notes and measure lengths for report purposes.

## RESULTS INSTANTANEOUS DATA REVIEW

Following an automated run, individual indents can be tracked by clicking on the numbered impression. Intelligent software accurately remembers where the impression was made and automatically moves the stage to the chosen indent. You can choose to not include, re-measure the impression manually with the movable gridlines or make a new indent. When excluded or re-measured, statistics are updated on the fly. Instant graphical view of Effective Case Depth.

## REPORT CREATION

Print results directly from the software or export data to the spreadsheet program of your choice for further statistical analysis.

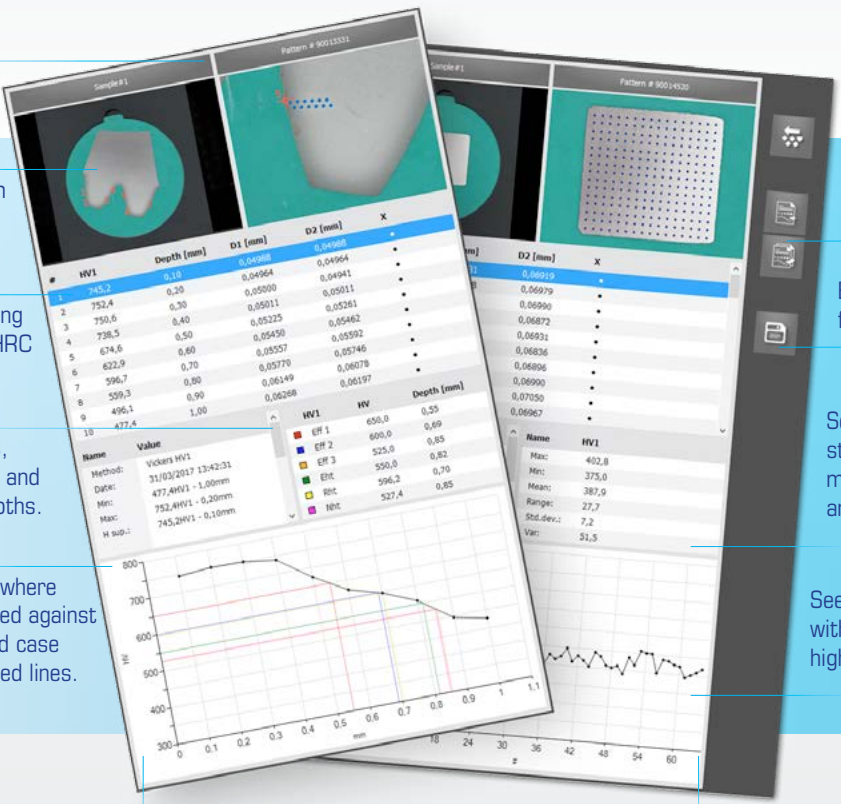

Select the sample and the pattern.

Spot tested zone from number labels.

See each result including depth, diagonals and HRC conversion or others.

See dynamic statistics, define CHD, RHT, NHT and three custom case depths.

See Case Depth chart where hardness value is plotted against depth. Identify specified case depth values from dotted lines.

Detect unexpected results, click the plot to go to indent. Verify, measure again or replace with a new indent.

Export single or all reports in PDF.

Export data as text file or CSV.

See preselected statistics including max, min, mean and deviation.

See uniformity chart with high and low highlighted tolerances.

AUTOMATIC MEASUREMENT CYCLE ON WELDS

TESTING ON WELDS

After scanning the whole sample, the fusion zones and the HAZ are clearly visible and distinguishable from the base material, even with a scratched surface.

Using software's tools it is easy to draw different indentation patterns lines with correct and precise positioning. In less than one minute add pattern positions with determined spacing between indents, defined distance from the border, from inside and outside surface, from fusion line or weld centerline.

The entire indentation distance can be simply measure in one complete view and added to your final report.

Scanned images of weld cross section.

Customizable test report with client logo and sample information. See weld image, pattern, results and statistics at a glance.

See hardness curves grouped all together.

REFERENCE CIRCLE TOOL

Ideal for irregular or curved samples, where indents need to be at a given distance from the edge. This exceptional tool allows indents to be positioned at precise distances from the sample's edge. Once a radius is specified, the software shows a red circle around the indent position. Use this reference to go across a border and/or zone and add the indent position. This visual guide is the fastest way to create a defined pattern on a multi-zoned or irregular sample.

CUSTOM STEP TOOL

When the tool is active, the virtual Joystick commands move the stage for the distance defined by step instead of a continuous movement. Use this feature to create a pattern line where groups of spaced indents are placed in base material, HAZ and fusion. Define and fix a custom stage movement in X, Y or Z axis. Move on the point of interest (e.g. fusion line) and add an indent position for each spacing distance step.

REAL TIME SUPPORT:

The remote control connects AFFRI's testers from anywhere in the world with AFFRI's engineers. Our experts can remotely diagnose any technical issue, provide additional operator training and update the software version.

TUTORIAL, ASSISTANCE AND REPAIR

CUSTOMIZABLE REPORT TEMPLATES

Report are created directly by Affri team. Templates can be 100% customized basing on any need. Not only company logo, sample map and indentation images, the report layout can be filled with any test information. Time by time, after the test cycle, choose what to export in final report by flagging or unflagging simple options.

TABULAR AND TXT DATA EXPORT

Print the results directly from the Affri software or export data in txt, csv and tabular format to the spreadsheet program of your choice for further statistical analysis. Images and statistics can be saved or copied easily and laid out in a standard, or customized, MS Office templates. Use "paste as link" native tool to update your data sheet with exported results and build a well organized database.

## ACCESSORIES

Affri provides a large variety of accessories to fulfill any purpose of test. Customized solution based on your needs can be made for perfect tests on rough pieces. A series of different anvils is available to test every size of test piece. Variety of accessories to facilitate testing on small or oddly shaped items. All AFFRI's accessories are customizable according to customers specifications, depending on dimensions and geometry of the samples and finished products.

**TEST BLOCKS**

## EXCLUSIVE DESIGN

The innovative design of WIKI JS is AFFRI's unique and exclusive. Comfortable and ergonomic working station built for facilitate operator's movements, allowing an organized and well-ordered work. Built-in side case to preserve tester's accessories.

## WORKING STATION

Solid and compact workbench with a large locker to accommodate computer, console and cables. Wide side table, suitable right or left, to have all within operator's reach.
